1890

You own a factory.

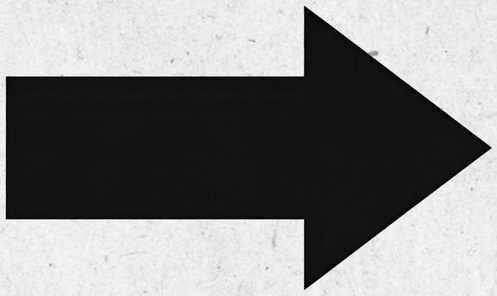

Electricity appears.

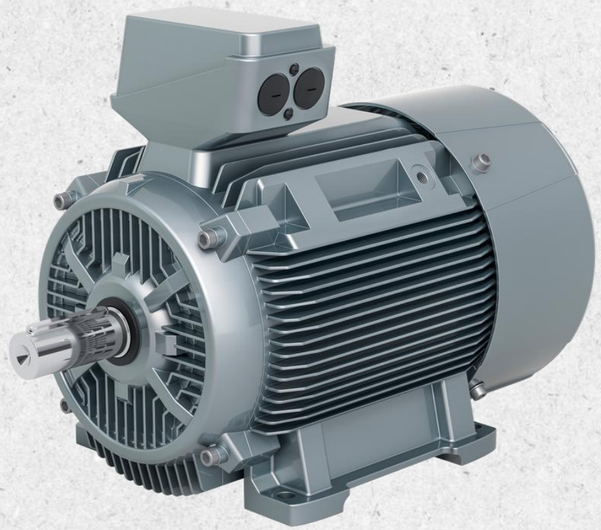

What do you do?

Remove the steam engine.

Install an electric motor.

Almost nothing changes.

But why?

Revolutionary technology.
Ordinary results.

They used the technology of the future...

...to power a factory from the past.

2026

We are doing the same thing with AI.

Customer → Employee → Email → Excel → Manager → Employee → Customer

↓

Customer → Employee → AI → Email → Excel → Manager → Employee → Customer

Congratulations.
We electrified the steam engine.

AI should not become another step in the process.

The breakthrough is not making old steps faster.
It is making some of them disappear.

Don’t ask:

~~“Where can we add AI in the next 5 years?”~~

Ask:

“If I built this company from scratch today… would I design this process the same way?”
